EN COURS – Responsive Coming Soon Template

EN COURS is a responsive "coming soon HTML5" page with a creative countdown clock.

It is was designed to bring a unique creative user experience, and made to be easy to customize.

This template was built for those who want minimalist coming soon page, and for those who want to display company information until their website is complete.

Features:

- Creative Countdown Clock
- JavaScript + CSS3 Animation
- Clean and Simple
- Responsive
- AJAX Subscription Form
- AJAX Contact Form
- Customizable Dialog
- Valid HTML5 / CSS3
- Well documented HTML and CSS files
- 3 Layouts Included
- Video as background
- Multi-Browser Support

Thank you for supporting us by purchasing this HTML5 template.

- The HighHay Team

Text and Logo Customization

The HTML files (index.htm, index_layout_alt.htm or index_layout_video.htm) themselves was made to be well documented (just follow comments inside) but if you need more help, here are some tips:

- **LOGO** : Replace the sample logo (logo.png file inside /img/picts/ folder)by yours, or change the following tag to indicate the emplacement of your own logo:

  ```
  <img class='logo' src='./img/picts/logo.png'>
  ```

- **LOGO** inside **CLOCK** : following tag to indicate the emplacement of your own logo:

  ```
  <img class='logo' src='./img/picts/logo.png'>
  ```

- **MOTO** or **DESCRIPTION** : Replace the content of this tag by your motto, description or invitation phrases (you can use the tag `<a class='text-altcolor'> </a>` for links) :

  ```
  <p class='title-desc soon-desc text-center' >
      Here will be an amazing Website by <a href='#' class='text-
  altcolor'>MIVFX</a>. So do not forget to subscribe if you do not want to miss
  it :
  </p>
  ```

- **SOCIAL NETWORK LINKS** : They are placed inside `<header class='header-top start'>` element , in `<ul class='s-block'>` tag. For customization:
  - For links: Replace `href` content of the `a` tag by your links.
  - For icons, since this template uses fontawesome icons. Just change the class name of the `<i class='fa fa-icon'></i>` tag to what you want. Check their website for more information (http://fontawesome.io).

- **DAILOGS** : To call dialogs, add class "show-info" (for about-us dialog), "show-message" (for message dialog), "show-contact" (for contact dialog) or "show-custom" (for custom dialog) to the *a* tags inside
  - `<div class='dialog-btn start'>` for dialog buttons placed at MIDDLE RIGHT (see index_layout_alt.htm model)
  - `<div class='dialog-btn pos-bottom start'>` for dialog buttons placed at BOTTOM LEFT (see index.htm model)

  There are 3 predefined dialog view models :
  - A message dialog: an AJAX dialog where users can send messages to you.
  - An about us dialog, where you can put your company's information. Just replace the sample content with your own.
  - A contact dialog, a brief information dialog. Just replace the sample content with your own.
  Additionally, you can create your custom dialog content. Below is the pattern for that:

```
<!--BEGIN OF custom dialog-->
<section class='dialog-frame dialog-custom'>
    <div class='d-comment d-content'>
        <header class='d-header d-content-header'>
            <h2 class='dh-text'><i class='fa fa-gavel'></i> CUSTOM </h2>
            <a class='d-close'>
                <div class='d-close-x'></div>
            </a>
        </header>
        <div class='d-content-core'>
            <p style='font-size:3rem;'>CUSTOM DIALOG CONTENT</p>
        </div>
    </div>
</section>
<!--END OF custom dialog-->
```

- **FOOTER NOTICE** : Replace legal notice (inside footer tag) by your own or just remove it if you want so:

```
<p class='notice'>
    design by <a href='http://www.yourcomp.com' class='link'>MyComp</a>
</p>
```
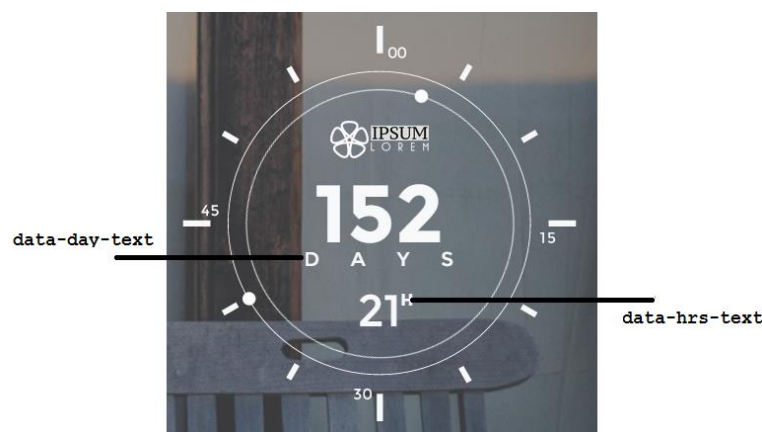

Design by MyComp ◀

Theme Customization and Clock Configuration :

Configurations are placed as data-… attributes inside `<div class='site-config'></div>` tag. The sample index.html file shows an example of customization. Countdown, text colors, background color (or image), and AJAX server are customizable.

Countdown Clock

To customize the countdown clock, add or change these attributes:

- `data-date` : attribute that indicates the launching date (Format: MM/DD/YYYY HH:MN:SC).
- `data-date-timezone` : attribute that indicates the launching date timezone. 0 UTC is the default value.
- Replace `data-hrs-text`, `data-day-text` with your custom text if you want (for localization as example).
- `data-zeroday-text` : Text that will be shown when countdown goes zero.

Text and background

Change background or text color by adding or changing these attributes inside `<div class='site-config'></div>` tag :

- `data-background` : attribute that indicates the background color or the background image.
    - To use image as background, just indicate image url as follow:
      `data-background='url("./img/picts/tea.jpg")'`
    - To use color as background, indicate the color in rgb, rgba or hexadecimal format such as :
      `data-background='#5cb5e2'`

NOTE : Pictures Included are from Unsplalsh.com (http://unsplash.com/) and are not part of the purchase since they are availaible for free at Unsplash.com

Background mask

A background mask layer is available if you do not want to alter the background image directly. To do so, add or change the following attribute inside `<div class='site-config'></div>` tag :

- `data-background-mask` : attribute that indicates the background mask.
    - To use image as mask layer, just indicate image url as follow:
      `data-background-mask='url("img/mask/radial-grad.png")'`
    - To use color as mask layer, indicate the color in rgb, rgba or hexadecimal format such as :
      `data-background-mask='rgba(30, 29, 37, 0.79)'`

Video as background

To use video as background, add or change the following elements in your html file:

```
<div id="container" class="video-container small-hide">
    <video autoplay="autoplay" loop="loop" autobuffer="autobuffer" muted="muted"
        width="640" height="360">
        <source src="vid/loop-bg.webm" type="video/webm">
        <source src="vid/loop-bg.mp4" type="video/mp4">
    </video>
</div>
```
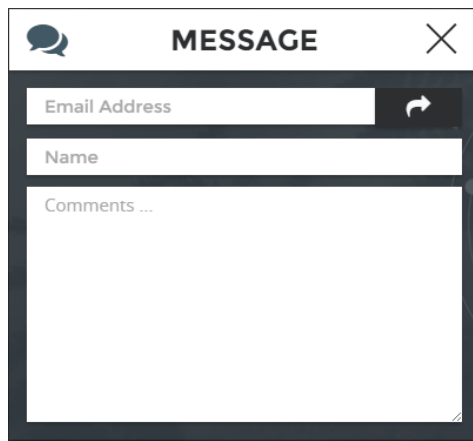

Video should be available in **webm** and **mp4** format to support multiple browser.

If you do not want video as background, just remove this group of elements.

Dialog Window Color

Change dialog window background color by adding or changing this attribute inside `<div class='site-config'></div>` tag :

- `data-dialog-color` : dialog background color, in rgb, rgba or hexadecimal format.

Messages and Email Subscription AJAX Server

A simple php-based AJAX server is provided in *ajaxserver/server.php* file. This server handles messages and email subscription requests made by users.

The sample code inside *server.php* file just writes messages or emails in text files. We encourage you to write your own server implementation, call an external API or write in a database.

The JavaScript file " *form_script.js* " handles the client side. You are free to customize it to your need.

Also, add or change these attributes inside `<div class='site-config'></div>` tag to point to your own server if you do not want to use the default build-in server:

- `data-subscription-server` : email subscribtion server
- `data-message-server` : message reception server
